To Study the Food chain.

Introduction :-

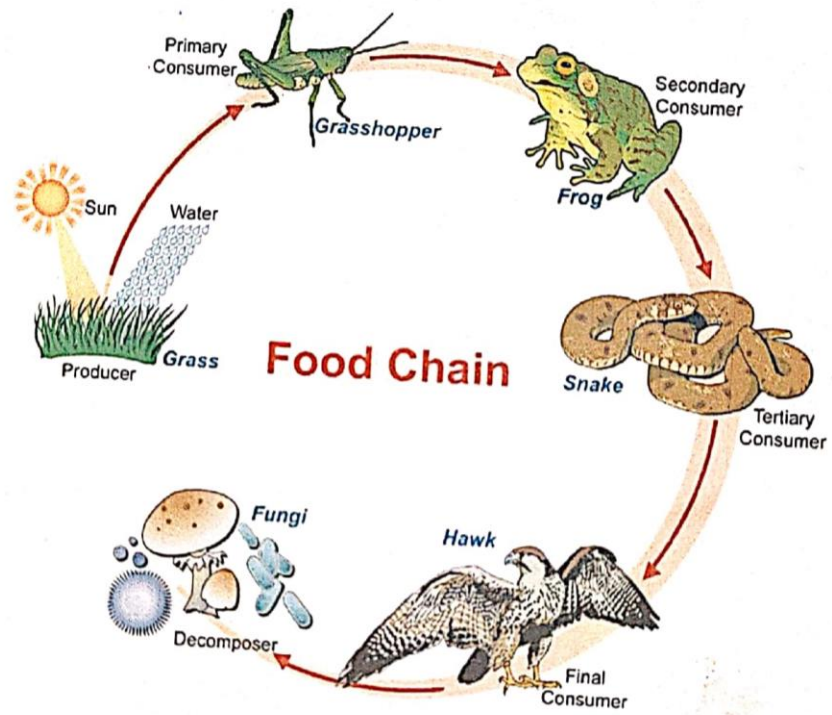

- A common metric used to quantify food web trophic structure is food chain length. In its simplest form, the length of a chain is the number of links between a trophic consumer and the base of the web.
- The mean chain length of an entire web is the arithmetic average of the lengths of all chains in the food web.
- The food ~~web~~ chain is an energy source diagram.
- The food chain begins with a producer which is eaten by a primary consumer. The primary consumer may be eaten by a secondary consumer which in the turn may be consumed by a tertiary consumer.
- For example, a food chain might start with a green plant as the producer, which is eaten by snail, the primary consumer. The snail might then be the prey of secondary consumer such as a frog, which itself may be eaten by tertiary consumer such as a snake.

 **Biology** **Food Web**

What is food chain

- A food chain is a linear network of links in a food web starting from producer organisms (such as grass or trees which use radiation from the sun to make their food) and ending at apex predator species (like grizzly bears or killer whales), detritivores (like earthworms or woodlice), or decomposer species (such as fungi or bacteria).
- A food chain also show how organisms are related to each other by food they eat.
- Each level of a food chain represent a different trophic level.
- A food chain differs from a food web because the complex network of different animals' feeding relations are aggregated and the chain only follow a direct linear pathway of one animal at a time.
- Natural interconnections between food chain make it a food web.

Types of food chain:

There are two types of food chains:

i) **Detritus food chain:** - The detritus food chain includes different species of organism and plants like algae, bacteria, fungi, protozoa, mites, insects, worms and so on.

- The detritus food chain begins with dead organic material.
- The food energy passes into decomposers and detritivores, which are further eaten by smaller organisms like carnivores.
- Carnivores, like maggots, become a meal of bigger carnivores like frogs, snakes and so on.
- Primary consumers like fungi, bacteria, protozoans and so on are detritivores which feed on detritus.

ii) **Grazing food chain:**

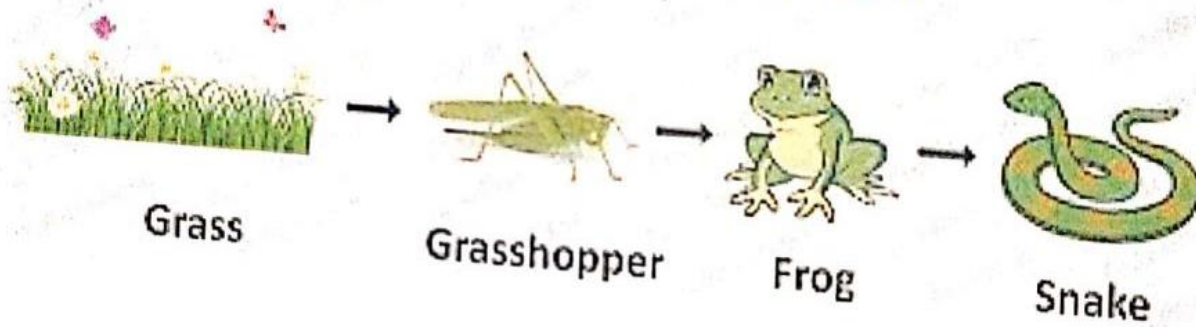

- The grazing food chain is a type of food chain that starts with green plants, passes through herbivores and then to carnivores.

In a grazing food chain, energy in the lowest trophic level is acquired from photosynthesis.

- In this type of food chain, the first energy transfer is from plants to carnivores.
- This type of food chain depends on the

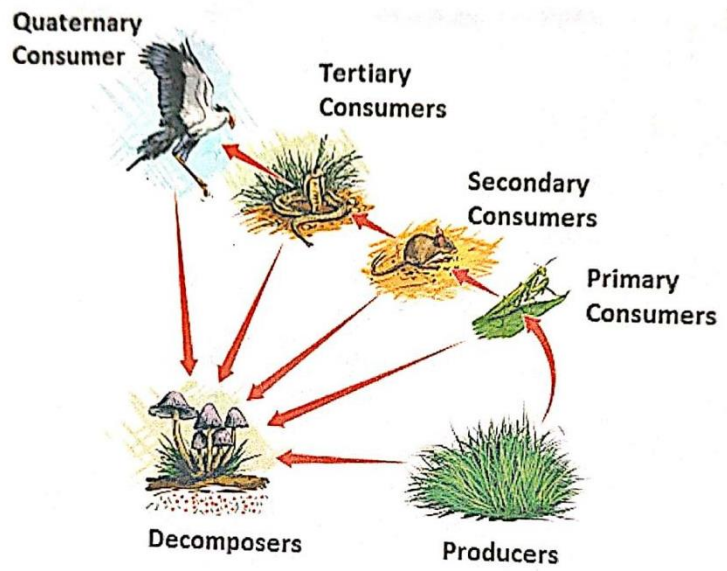

Food Chain

teachoo.com

on the flow of energy from autotrophs to herbivores.

- As autotrophs are the base of the all ecosystem on earth, the majority of ecosystem in the environment follow this kind of food chain

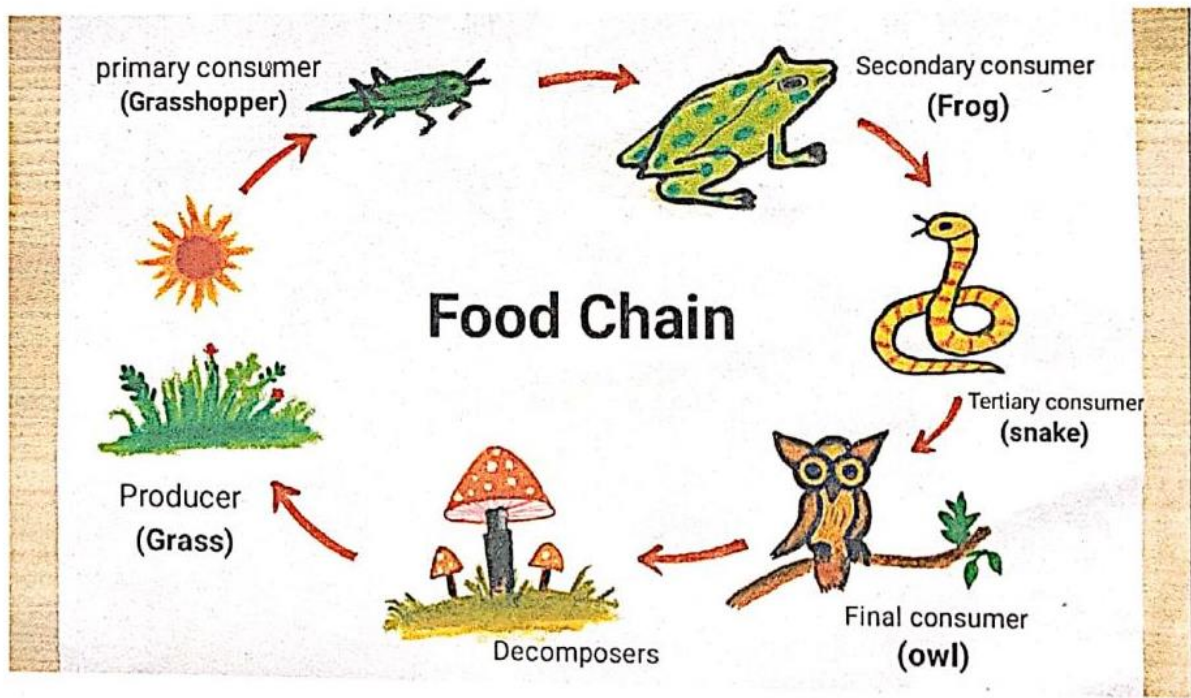

Uses of food chain:-

The efficiency of a food chain depends on the energy first consumed by the primary producer.

The primary consumer get its energy from the producer.

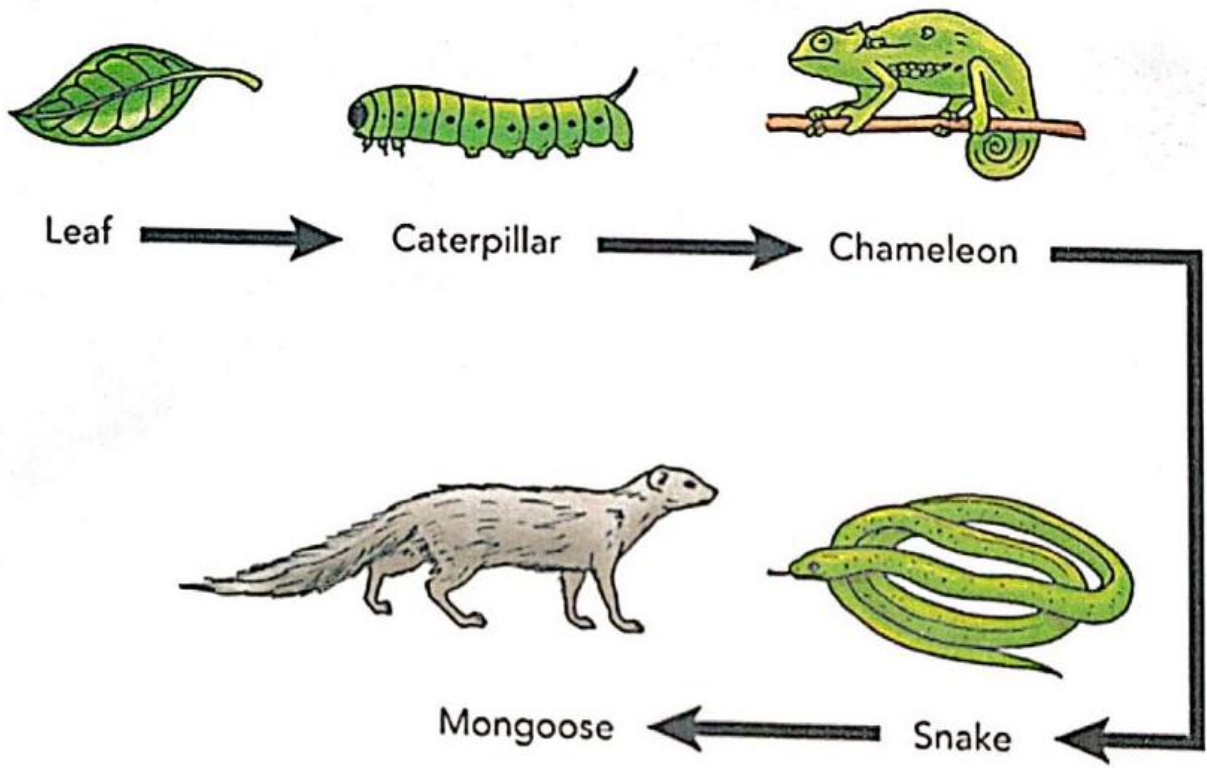

The tertiary consumer is the 3rd consumer 'it is placed at number four in the food chain.

producer → primary consumer → secondary consumer → Tertiary consumer.

Importance of food chain

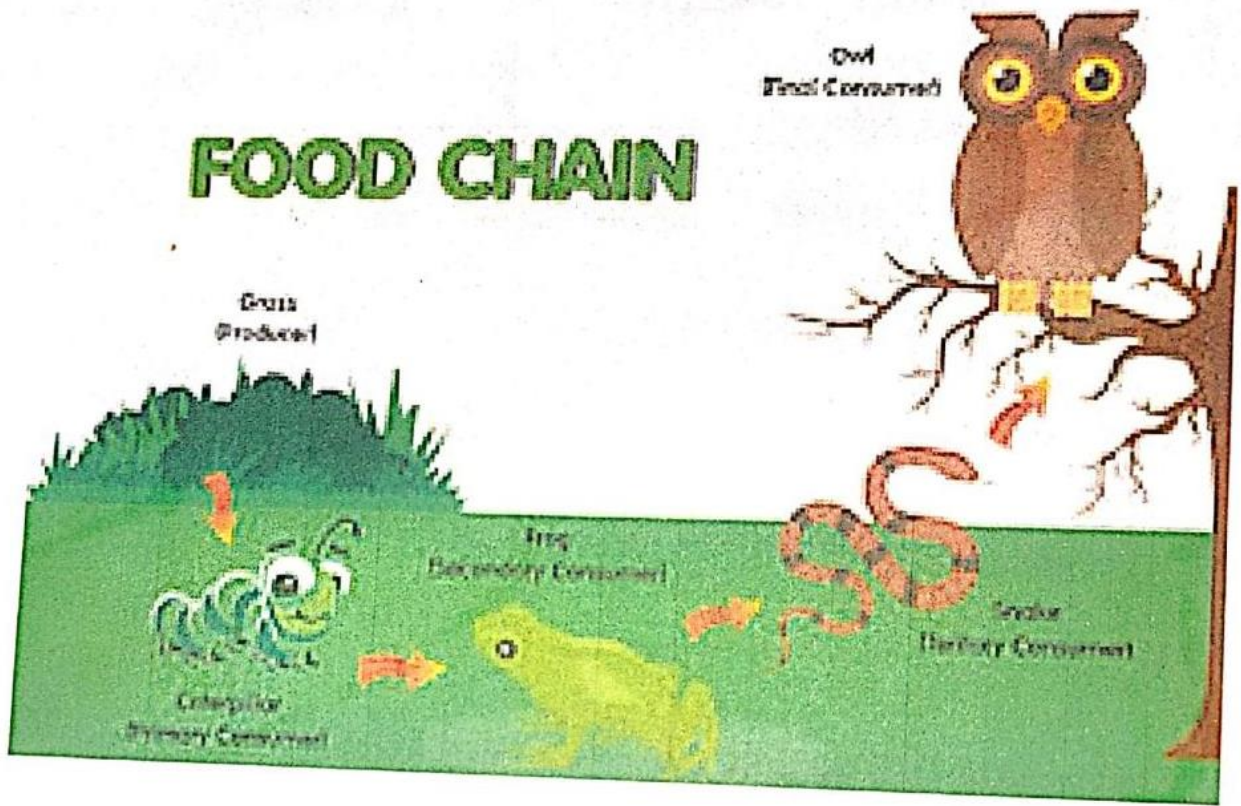

- Food chains are very important for the survival of most species.
- When only one element is removed from the food chain can result in extinction of a species in some cases.
- The foundation of food chain consists of primary producers.
- Primary producers, or autotrophs, can use either solar energy or chemical energy to create complex organic compounds, whereas species at higher trophic levels cannot and so must consume producers or other life that itself consumes producers.
- Because the sun's light is necessary for photosynthesis, most life could not exist if the sun disappeared.
- Even so, it has recently been discovered that there are some forms of life, chemotrophs, that appear to gain all their metabolic energy from chemosynthesis driven by hydrothermal vents, thus showing that some life may not require solar energy to thrive.
- Decomposers, which feed on dead animals, break down the organic compounds.

Into simple nutrients that are returned to the soil.

- These are the simple nutrients compounds that plants require to create organic compound.
- It is estimated that there are more than 100,000 different decomposers in existence.
- Many food webs have a keystone species.
- A keystone species is a species that has a large impact on the surrounding environment and can directly affect the food chain.
- If this keystone species dies off it can set the entire food chain off balance.
- keystone species keep herbivores from depleting all of the foliage in their environment and preventing mass extinction.
- Food chains were first introduced by the Arab Scientist and philosopher AlJahiz in the 10th Century and later popularized in a book published in 1927 by Charles Elton which also introduced the food web concept.

FOOD CHAIN

~~E~~ffect of food chain is effect of food chain :

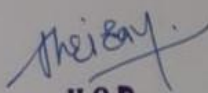

- 1) Endangerment and extinction of species
- 2) Fragmentation of ecosystems.
- 3) Imbalance of natural environments.
- 4) Migration of animal.
- 5) Loss of biodiversity.
- 6) Loss of food sources
- 7) Conflicts.

- Affect Food Chains

- Each organism fills a specific niche in an ecosystem that can be seen in food chains.
- Do they create initial energy through photosynthesis? Can they eat one group to keep the population in control?
- Do they decompose other organisms.
- Are they acting as a predator or prey?
- Food chains are important because they show the intricate relationship.

Subject – Permission for field visit...

Applicant – Mr.Neel B. R (Head , Department f Botany).

Respected sir,

With reference to above mentioned subject for this academic year, Department of Botany has planned to arrange a field visit on Sunday 03/04/2022 dated 3/4/2022 which is necessary for students to complete the course. This field visit aims to study the different geographical conditions and life sciences related observations with it at the paces like Deogiri fort, Ghrushneshwar , Verul caves and Sidhharth garden. As the activity strengthens the learning , on behalf of the Botany Department I request to grant permission for the field visit.

Field Visit Report

The college regularly encourages the students for the best learning experience and organises curriculum-related activities. Similarly, on Sunday 03/04/2022, the Department of Botany organized the field visit following the route Dahigaon- Ne -Deogiri fort - Ghrushneshwar - Verul caves-Sidharth garden- Prozone Mall (Aurangabad) – Dahigaon-Ne. The students actively participated in this event and were guided by the faculty members about the purpose of the visit and the curriculum issues to be learned. During the visit, the observations of various plant species, their growth with the geographical conditions, etc. were done by the students with the guidance of the faculty members. The students studied the biodiversity of the places visited and noted the observations in the report submitted for evaluation. The field visit helped the students to learn the concepts of life sciences and gave better experience of learning. All the Students and faculty members supported for successful completion of the visit.

Field Visit Report

The S.Y.B.Sc students, science faculty of Loknete Marutrao Ghule Patil Mahavidyalya Dahigaon- Ne has visited to the Krishi Vigyan Kendra Dahigaon- Ne on date 24/02/2022 for a learning different facts of sericulture and also detail information of species of silk worms. Faculty member Mr. Navnath Warule also guided the students & explained the topic related in curriculum with the observations at the field. 35 students were present during visit at Krishi Vigyan Kendra. The students also recognize knowledge regarding sericulture under the guidance of Shri. Lakhe sir, Krishi Vigyan Kendra Dahigaon -Ne. The student learned about the life stages of silk worm like Egg hatching period, Larva, Pupa, Adult, Cocoon formation, Mating of silkworms, Egg structure and noted the observations under the skill of their understanding. Student also visited different departments of Krishi Vigyan Kendra like Soil Testing & Analysis, Entomology, Farm field of Sugar Cane and Wheat. This visit encouraged students for learning through own observations which would be better experience of learning. Evaluation of the learning was carried out on the basis of observations noted and orally discussion with the students.
